

For Immediate Release

March 6, 1999

High-quality medical images now available
Previews and order information on the Web

POSTURA

Postura is pleased to announce the availability of three sets of 35mm slides of human spinal anatomy. These slides are the work of William J. Ruch, D.C., author of *Atlas of Common Subluxations of the Human Spine and Pelvis* (CRC Press, 1996).

In addition to the complete set of images from the book, reproduced in 160 high-resolution color slides, Dr. Ruch has prepared two additional sets of slides. One details the Autonomic Nervous System (12 slides), the other concentrates on the Cervical Spine (20 slides).

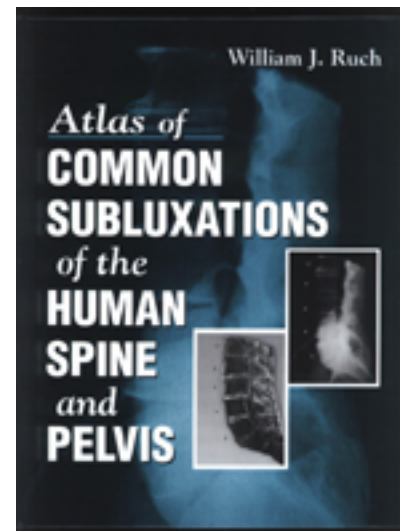

Newly-added is the availability of the images from the Autonomic Nervous System and Cervical Spine series as overhead transparencies. These are available as either full sets or individual images (35mm slides are available only in full sets). Previews of the slides can be seen online at

<http://www.postura.com>

Please note that these materials include anatomical dissections of human specimens and are intended for the education of medical and legal professionals and all interested persons. They may not be suitable for children or others offended by medical images.

Sample images are available both on HTML pages and as [Adobe Acrobat®](#) preview pages. The website also has a link to order Dr. Ruch's book directly from [Amazon.com](#).

Postura also has links to other resources for information about the spine and the nervous system.
